- Environment Protected
- Tamper Proof
- No False Operate
- Small Size – 2" x 2" x 15/16"
- Lightweight – approximately 2.5 oz.
- Rugged
- Transient Protected to 6000V

Application of power simultaneously starts timing of the preset interval and turns the load **ON**. The load stays On for the preset On time then turns OFF for an equal length of time. The ON/OFF cycling of the load continues until power is turned OFF. Cycling can be specified as OFF/ON see below. Removal or interruption of power at any time during the cycle will cause the timer to reset.

Control the timing of high power electric heaters, lamps, transformers and other high current loads rated less than 10 amps Resistive. CMOS digital circuitry is combined with high current output relay contacts. P/C board and internal components are encapsulated in a flame retardant molded housing, fitted with quick connect wiring terminals. Available in all standard voltages and frequencies. Fixed or adjustable timing from .1 seconds to 24 hours.
